Calling All Science Journalists and Scientists: Now's the Time to Counter WEF on Vaccinations

New Myths or Old Myths? Vaccine History is being revised

Ramola D

Feb 18

This week's Strategic Intelligence update from the World Economic Forum—which Klaus Schwab tells us wants to make us all cyborgs without agency—focuses on **vaccinations** and publishes multiple myths on vaccines, revising history as the CDC does, the pharma companies do, and the entire megalith of the medical-school industry run on Rockefeller and Pharma guidelines do.

There is a lot to unpack here but for science and medical journalists, scholars, and scientists, this may not be hard to do. I hope to cover this shortly myself in greater detail but not in this post—this is a subject I have recently started learning and writing a lot more about but I know there are many journalists and scientists and physicians out there with much background and study on vaccines, whose voices we all need to hear.

Among the entrenched myths being presented here as counter to Misinformation on Health and “vaccine conspiracies” are the old canards that vaccines do not cause autism, that measles, mumps and polio vaccines have contributed to decline in morbidity and mortality from these diseases, and some new ones, that polio vaccines in Nigeria and Zika vaccines in Brazil did not cause the sterility and microcephaly now seen to be linked to them, and more.

In a wide-front attack on the facts of vaccine history, and in apparent desperation to reverse the building knowledge worldwide that **Vaccines Are Really Not Medicine nor Health treatments**, as [my recent report](#), for instance on the [Poisons in Vaccines](#) proves, WEF here presents several focuses on vaccine history, vaccine “hesitancy,” vaccines and pandemics, security, and workplaces as well as, interestingly, the “economic and business implications of vaccination.”

VACCINES ARE HARDLY A TARGET OF MISINFORMATION, WE HAVE TOO LONG BEEN TARGETED FOR MISINFORMATION ON VACCINES BY THE PHARMA INDUSTRY: They Have Lied to us About Vaccines in Every Way

I find it interesting also that this little treatise refers to vaccines becoming a “target” of misinformation, while in point of fact, the poison-laden and lethal COVID vaccines are currently targeting people the world over, gifting death and disability in huge numbers in every country, [as many scientists and journalists have noticed](#), and as anyone looking at the VAERS database and others recording vaccine injuries and death can tell—not to mention watching the videos of people, especially athletes, collapsing and dying on the spot after taking one, two or three doses of the Death Shot.

This is my video report published last week, a first in a series to address the False Promise of Vaccines:

[News Report 7: All Vaccines Carry Poisons, COVID Vaccines Found to Carry Mega Poisons](#)

I am continuing to read and will report as I read. To me as to all of us who treasure education over misinformation, truth over lies, facts over propaganda and rationalization, it is really very simple. There can only be one truth about vaccines as about anything else.

When you find that truth—as many of us have found already—you cannot be “pro-vaccine” as the entire misled “liberal Left” and “educated Right” imagine it is possible to be, you can only be Pro-Truth and Anti-Vaccine, if you are Pro-Health and Pro-Fact, that is.

Of course if you are Pro-Lies, Pro-Propaganda, Pro-Cover-Ups, and Pro-Profit, as the Pharma industry is, you will stay Pro-Vaccine in your pinsriped suit forever—but the world is awakening to Truth today.

If you are a science journalist or scientist with knowledge of true vaccine history, contents, effects, and dangers, please write an op-ed, an essay, a counterpoint, make a video, do an interview (please email me at ramolad@everydayconcerned.net to do a Newsbreak on this subject if you'd like to be on Ramola D Reports, mention this post)—make your voice heard. We need a chorus of educated voices telling the WEF what Truth is, what Health is, and what Vaccines are and are not, really.

And a Schwab-like paragraph which might inspire you to write to counter this classic “conspiracy-theory-pushing” gobbledygook: *“Many people still believe that vaccines can cause autism, despite the fact that scientific research has disproven this supposed connection. New, as yet mysterious phenomena can fuel a flurry of speculation and rumours, as people try to make sense of complex information - driving a psychological phenomenon known as aversion to ambiguity. Strong believers in conspiracy theories tend to emerge in these ambiguous settings and cultivate audiences eager for some kind of explanation. This can take advantage of the genuine concerns and questions that people often have about vaccines, including parents being newly exposed to reams of online misinformation.”* Please write!
