

The "New Way" of Stealth Urban Spectrum Assault: Yes, Microwave Weapons Are Being Used From Neighboring Houses & Parked Cars, Utility Vans, Service Trucks

Not just Drones, Celltowers, Antennas, Satellites: Countering New Disinfo from Richard Lighthouse

Ramola D

Mar 22

I received a missive from Richard Lighthouse this evening, a pointed one I should add, since I had unsubscribed from his suddenly-revived-in-my-inbox newsletter a day or so ago—a subscription I don't recall making—after my publication of [The Hidden Hand: How NSA, CIA, DHS, and FBI Collude to Keep Victims of their Top Secret \(Yet Well Known\) Extremely Inhumane Neuro/DEW Experimentation and Operation Crimes \(under Cover of Surveillance, Community Policing, Counter Terrorism\) Unheard, Unseen, and Powerless for Decades—Installed Support Orgs and Groups, Installed Intel Plants](#) which included a look at Mr. Lighthouse, a faux-nom for "Owen Calvert" known to be associated with "Targeted Justice," one of the so-called support groups examined in that article.

Suffice to say—given all I have reported earlier regarding this group, and my own interactions including an interview a few years ago, where I personally encountered his Disinfo-pushing—I am not a fan of his pronouncements and flow diagrams, his Clown banners at Langley or his questionable "support" of those illegally/unlawfully targeted by the FBI/DHS and sold nonconsensually into experimentation-slavery to the DOD, DOJ, and CIA—all felonious crimes, a Black Operation well-hidden by precisely such faux-support for decades (along with other constructs such as a deliberate campaign of denialism from all civil liberties and human rights groups such as ACLU, EPIC, Amnesty and all mainstream media such as The New York Times and Wired).

MILITARY EMF WEAPONS HAVE BEEN BROUGHT INTO USE AGAINST CIVILIANS IN USA, ON MOUS BETWEEN DOD AND DOJ SINCE 1994

Modern Ground Electronic Warfare

Electronic Warfare is the use of the electromagnetic spectrum, that mostly invisible world around us, to conduct military action - a key capability in today's battlespace.

Modern Ground Electronic Warfare—a military weapon, portable and backpackable./[https://www.leonardodrs.com/sitrep/q1-2016-the-invisible-fight/modern-ground-electronic-warfare/.](https://www.leonardodrs.com/sitrep/q1-2016-the-invisible-fight/modern-ground-electronic-warfare/)

I wonder now who precisely he is trying to protect, the DOD or CIA or both—or DHS and FBI—or all four, for this one blatantly publishes fanciful tales designed to deflect focus from these Hidden Hand parties who have installed soldier mercenaries in “fusion houses” directly next door to people they have targeted for victimizing, pay them for “technical surveillance” and “Ubiquitous Technical Surveillance” and non-consensual “Health Monitoring” — all of which seems to involve the use of (quite unhealthy) microwave weapons, millimeter wave weapons, tracking radar weapons and other exotic tech, which the military has now rendered portable in many many ways, including handheld, gym-bag-size, suitcase-size, or larger, the kind carried in the trash and recycling trucks your city uses, not to mention service vans, utility vans, USPS vans, UPS and FedEx trucks.

Outright Lies: “There are no portable microwave beam weapons”

This is the missive—with language designed to control, manage, and handle any disclosure of this incredibly pernicious operation which is destroying bodies, brains, and lives:

Cell Towers are a Weapon System

Richard Lighthouse

Mar 21 ■ ■ ■

Make no mistake - Digital beamforming using panel antennas is a weapon system.

Targeted Individuals are hit with these microwave attacks every day.

The scalar wave can travel through many buildings before hitting a person

person.

1. **We know it is a scalar wave because a person with V2K can sit under 12 feet of water - and still hear the V2K. Only a scalar wave can do that. Even powerful Xrays and gamma rays would be easily absorbed by a few feet of water.**
2. **Your neighbors do not have enough electricity in their house to fire a microwave weapon. It requires the equivalent of about 4000 homes to fire a microwave weapon one time. Your neighbors do not have a microwave beam weapon!**
3. **There are no portable microwave beam weapons. They do not exist because they cannot contain that much electricity in small package.**
4. **Look at the size of the power cables that go up a cell tower. That is a large amount of electricity!**
5. **Four panel antennas usually work together to create a single weapon, which can be fired millions of times each second, at different targets.**

6. **Scalar waves can easily penetrate a faraday cage. Water is your best shield.**

7. **As a Targeted Individual, more than 90% of your attacks come from cell towers.**

Opinions of Targeted Justice, Inc.

There are several false-narratives and focus-shifters in this newsletter, and I will post some information below to inform all a little on the state-of-the-art in microwave and spectrum weapons.

High-Powered Microwave Weapons Have Gone Mainstream

In this recent 60 Minutes episode on "Havana Syndrome" hits on specially-selected diplomats and spies, in fact, James Benford, co-author of High Powered Microwaves talks about microwave weapons ranging in size from suitcase-stashable to truck-concealed, which can be used from close in or far away (Go past the 21 minute mark):

PORTABLE MICROWAVE WEAPON PICTURED IN 60 MINUTES:

Declassified Document, US Army, Reveals Pulsed Microwave Weapons

Body heating, disorientation, disruption of muscle control, seizures, convulsions, memory loss, heightened aggression, lowered aggression, microwave hearing are some of the bioeffects of Spectrum weapons reported in this 1998 Army document released on FOIA request in 2006. The human body clearly is affected by very low frequencies as also by high frequencies, and by the varying of radio frequency with intensity and magnetic field to produce different effects. The devices addressed here sound like they are or could be portable.

[Bio effects of Selected Non-Lethal Weapons/US Army](#)

SOME EXCERPTS:

Because this technology is considered to be tunable, the influence on subjects could vary from mild disruption of concentration to muscle spasms and loss of consciousness. The subject(s) would have varying degrees of voluntary control depending on the chosen degree of incapacitation.

Technological Status of Generator/Aiming Device

An electric field strength of roughly 100 Kv/m over a time period of 1 nanosecond is approximately the condition thought to be necessary to produce the desired effect when provided to an overall repetition rate of 15 Hz. Such a field may be developed using a radar-like, high-peak-power, pulsed source or an electromagnetic pulse generator operated at 15 Hz. These technologies exist today sufficient to evaluate the disabling concept. Power requirements are not high because the duty factor is so low. Aiming devices are currently available, but a high degree of directionality at long distances will require development. It may be necessary to provide bursts of these nanosecond pulses in order to stimulate the desired effect. As the duty time increases so does the average power requirement for power source. Because there were no open literature reports from which to make inferences, there is some uncertainty about the power levels required.

Range

The effective range could be hundreds of meters.

Mechanism to Reproduce the Desired Effects

Application of electromagnetic pulses is also a conceptual nonlethal technology that uses electromagnetic energy to induce neural synchrony and disruption of voluntary muscle control. The effectiveness of this concept has not been demonstrated. However, from past work in evaluating the potential for electromagnetic pulse generators to affect humans, it is estimated that sufficiently strong internal fields can be generated within the brain to trigger neurons. Estimates are that 50 to 100 kV/m free field of very sharp pulses (~ 1 nS) are required to produce a cell membranous potential of approximately 2 V; this would probably be sufficient to trigger neurons or make them more susceptible to firing.

The electromagnetic pulse concept is one in which a very fast (nanosecond timeframe) high voltage (approximately 100 kV/m or greater) electromagnetic pulse is repeated at the alpha brain wave frequency (about 15 Hz). It is known that a similar frequency of pulsing light can trigger sensitive individuals (those with some degree of light-sensitivity epilepsy) into a seizure and it is thought that by using a method that could actually trigger nerve synapses directly with an electrical field, essentially 100% of individuals would be susceptible to seizure induction. The photic-induced seizure phenomenon was borne out

Microwave Weapons Addressed in Other US Military and NATO Documents

Microwave weapons for testing and training are mentioned in various other declassified documents and public-domain documents including the NATO Peace Enforcement document mentioned in recent reports [including this one](#).

[Non-Lethal Weapons and Future Peace Enforcement Operations, NATO, 2004](#)

EXCERPT:

3.3 NON-LETHAL ANTI-PERSONNEL TECHNOLOGIES

3.3.1 Electromagnetic Technologies

3.3.1.1 Microwaves

a) Principle

Microwaves could replace mines thanks to their anti-personnel action. They can produce a burning sensation, but without causing skin lesions if the frequencies and power ceilings are properly set ($P < 4 \text{ W/kg}$).

The radio frequency spectrum, which can be used in the antipersonnel role, must be in the upper GHz region. The emitted wave can have various characteristics:

- Continuous.

- Narrowband.
- Mean and peak power.
- Pulse duration.

Where such weapons are concerned, some technical points are worth detailing for the possible establishment of several sub-categories:

- Single or recurrent shot weapons, using pulses or continuous waves.
- Frequencies.
- Propagation characteristics.

Please see the reports listed earlier for more information on what has been disclosed so far from the military documents.

Microwave Devices, Generators, Emitters Studied in the Public-Domain

There is also a lot of information emerging from public-domain study of electronics and radio frequency engineering, all of which points to the fact that portable microwave generators, emitters, repeaters indeed exist. This is a subject for a longer investigation for another day.

Cottage Industry of Assault and Battery in Neighborhoods Using Portable Microwave Weapons

As a reporter of non-stop continuous pulsed-microwave assault for 8 years now in my own neighborhood—traceable to several sources including neighboring houses—I can definitely attest to the widespread establishment by the Homeland Terror contingent of portable

microwave weapons—call them generators, emitters, devices, et al but they are weapons—in “fusion houses” filled with paid mercenaries, using their own homes, SUVs, pickups, as sites for location and covert assault and battery.

Much pulsed rancor emanating from this party — with the help of drones and external firing up of the house heating system to unleash ELF’s —has accompanied the writing of this post.

(You can’t write about microwave weapons and cover-up lies to conceal their existence without being assaulted by them apparently.)

Portable microwave weapons in fact are at the heart of what is being done—cruelly, barbarically, sadistically—by the US “Security” and “Law Enforcement” terror mavens to those they fear will tilt their apple cart and upend their long-established Cottage Industry of Cruelty with spectrum weapons—on which subject I will surely be writing more soon.

Meanwhile, no-one should be listening to Richard Lighthouse’s misleading missives seeking to protect criminals with badges and “Intelligence Communities” lacking ethics, conscience, and, indeed, intelligence.

It's quite the deception, but it will fall.
