Chapter 1: Introduction and context

0:01
1 second
Good morning and thank you for being here. Before I begin my remarks, I want to once again express my sincere gratitude to Canada's first responders
0:10
10 seconds
and all those serve who serve our communities every single day. To the men and women of our Canadian armed forces, our firefighters, police officers,
0:18
18 seconds
paramedics, and all those working in hospitals and medical clinics across this country, including our nurses, doctors, and support staff. Thank you.
0:27
27 seconds
We appreciate the sacrifices you make and the work you do every single day to keep Canadians safe. I don't think we
0:34
34 seconds
can ever say thank you enough. I also want to take a moment to thank the nearly 1,500 Canadians who reached out
0:41
41 seconds
and applied to testify at the Allison inquiry. Unfortunately, with only four days of hearings, it simply wasn't
0:48
48 seconds
possible to hear from everyone. But I want you to know that your willingness to come forward matters.
0:56
56 seconds
Every single one of your stories matter and just because we weren't able to hear your testimony during those four days doesn't mean your story should go
1:03
1 minute, 3 seconds
unheard. Today I want to talk about something that should concern every Canadian regardless of political affiliation.
1:12
1 minute, 12 seconds
Government transparency, accountability, and the growing lack of trust Canadians have for our public institutions. And I
1:20
1 minute, 20 seconds
want to explain why the lessons of one of the greatest public health scandals should never be forgotten in this
1:27
1 minute, 27 seconds
country. It took year many Canadians remember the tainted

Chapter 2: Historical lessons and trust

1:34
1 minute, 34 seconds
blood scandal. Thousands of Canadians contracted HIV or hepatitis C through contaminated blood and blood products.
1:41
1 minute, 41 seconds
But what is particularly troubling is how events unfolded. First came early warnings. Then came scientific
1:49
1 minute, 49 seconds
uncertainty. Then came reassurances from authorities. Then came growing pressure from patients, families, medical
1:57
1 minute, 57 seconds
professionals, and parliament. And eventually an inquiry exposed serious institutional failures leading to reforms and broader compensation.
2:07
2 minutes, 7 seconds
The Kever inquiry revealed failures in oversight, communication, and accountability. It demonstrated the
2:15
2 minutes, 15 seconds
devastating consequences when institutions failed to respond adequately to warning signs and eventually governments were forced to confront the question of compensation.
2:25
2 minutes, 25 seconds
In 1998, federal, provincial, and territorial governments established a hepatitis C compensation settlement valued at approximately $1.1 billion.
2:37
2 minutes, 37 seconds
But that settlement initially excluded many Canadians who had been infected outside the specific four-year period.
2:44
2 minutes, 44 seconds
It took years of additional pressure before the federal government announced another settlement of approximately $1 billion in 2006, which received court approval in 2007.
2:57
2 minutes, 57 seconds
Together, those two major settlements represented approximately $2 billion in compensation.
3:06
3 minutes, 6 seconds
And that was not the full extent of the financial response. Additional funding was committed to health care, treatment, and other support members, other support measures. Think about that.
3:17
3 minutes, 17 seconds
It took years of advocacy, public pressure, and independent scrutiny before broader compensation became available. And while financial

3:25
3 minutes, 25 seconds
compensation could never undo the suffering that those Canadians endured, it represented an important acknowledgement that people deserve
3:32
3 minutes, 32 seconds
support. Compare that to the minuscule amount of $20 million that our vaccine injured have received so far, which
3:41
3 minutes, 41 seconds
raises an important question today. Have we learned anything from our past mistakes?

Chapter 3: Concerns about transparency

3:47
3 minutes, 47 seconds
This past September, I chaired the Allison Inquir in Parliament Hill. More than 1400 Canadians applied to share their experiences. Four days, we
3:55
3 minutes, 55 seconds
listened to heartbreaking testimony from Canadians who reported serious injuries following CO 19 vaccination. We heard from people who had lost their ability
4:03
4 minutes, 3 seconds
to work, people who had exhausted their savings, people who had sold their homes or businesses to pay for medical treatment, and families who had lost
4:11
4 minutes, 11 seconds
loved ones and were searching for answers. We also heard concerns from medical professionals about patients who suspected adverse reactions may never
4:20
4 minutes, 20 seconds
have been formally reported. It's just one example, and there was many. Dr.
4:25
4 minutes, 25 seconds
Charles Hoff told us how he repeatedly tried to submit reports to BC public health and they were constantly
4:32
4 minutes, 32 seconds
rejected. Could there be thousands more Canadians whose experiences have never been properly documented?
4:39
4 minutes, 39 seconds
We don't know. And that is precisely why comprehensive reporting, access to medical information, and independent
4:46
4 minutes, 46 seconds
investigation are so important. These experiences deserve to be taken seriously while medical causation must

4:54
4 minutes, 54 seconds
be established through appropriate clinical and scientific assessment. We cannot properly understand the scale of a problem if we don't have access to the information needed to investigate it.
5:05
5 minutes, 5 seconds
And that brings me to something I find particularly troubling. It has been reported that Health Canada issued an access to information processing
5:13
5 minutes, 13 seconds
extension of approximately 15 years for a request involving millions of pages of vaccine and adverse drug reaction records dating back to 1998.
5:23
5 minutes, 23 seconds
15 years.
5:25
5 minutes, 25 seconds
Think about that. Canadians are seeking answers about vaccine safety, adverse reactions, and how government institutions responded to potential
5:34
5 minutes, 34 seconds
warning signs, and an access to information request involving relevant records could take approximately 15
5:41
5 minutes, 41 seconds
years to process. Health Canada cited the extraordinary volume and complexity of the request, which has reportedly
5:48
5 minutes, 48 seconds
since been narrowed. But surely this does raise obvious questions. How can Canadians have confidence in a government transparency when accessing
5:57
5 minutes, 57 seconds
important public health records could take up to 15 years? And this is isn't the only example of a serious delays.
6:04
6 minutes, 4 seconds
According to Health Canada's own annual report on access to information act for 24 25 time period, the department
6:11
6 minutes, 11 seconds
carried forward 1,812 outstanding access to information requests into the following year. Of those requests, over
6:20
6 minutes, 20 seconds
1,500 were already beyond their legally mandated deadlines. That's more than 83% of all outstanding requests. And it gets worse.
6:30
6 minutes, 30 seconds

Of the over 1,800 access to information requests Health Canada completed during the same year, over a thousand or a 56%
6:38
6 minutes, 38 seconds
were completed beyond the legislated timelines. These figures cover access to information requests across the department, not just vaccine related
6:47
6 minutes, 47 seconds
records, but they reveal a much broader problem with Canada's ability to obtain timely access to government information.

Chapter 4: Institutional responsibility

6:54
6 minutes, 54 seconds
These aren't numbers from a political opponent. These are Health Canada's own numbers published in its own report.
7:01
7 minutes, 1 second
When more than eight out of 10 outstanding requests have already exceeded their legal deadlines, Canadians are entitled to ask whether the system is delivering the
7:09
7 minutes, 9 seconds
transparency that Parliament intended. I recognize that personal medical information must be protected. I recognize that processing millions of
7:17
7 minutes, 17 seconds
documents is a significant undertaking, but those challenges should lead to better systems, more resources, and more
7:25
7 minutes, 25 seconds
timely disclosure, not extraordinary delays. And let me be clear, this is not just about the current Liberal government. Previous governments,
7:33
7 minutes, 33 seconds
including Conservative governments, have also a responsibility to ensure that Canada's access to information system works. Transparency should never depend
7:42
7 minutes, 42 seconds
on which political party is in power. We should all be held to the same standard.
7:48
7 minutes, 48 seconds
When I look at what we heard at the Allison inquiry and compare it with the history of the Tainted Blood scandal, I see questions that deserve serious
7:56
7 minutes, 56 seconds
attention. Were early warning signs adequately investigated? Were Canadians given complete and timely information?
8:04

8 minutes, 4 seconds
Were individuals reporting adverse events treated with respect? Were the systems designed to support affected Canadians actually working? And when
8:13
8 minutes, 13 seconds
concerns were raised, did our institutions respond quickly enough?
8:17
8 minutes, 17 seconds
These are questions, not conclusions that the two situations are medically equivalent. But the tainted blood scandal taught us that governments and
8:25
8 minutes, 25 seconds
institutions can make serious mistakes and that failures of transparency and accountability can compound harm. We
8:33
8 minutes, 33 seconds
cannot afford to wait decades to find out whether our institutions responded appropriately.
8:39
8 minutes, 39 seconds
One of the most troubling things we heard at the Allison inquiry was the frustration that Canadians experiencing trying to obtain answers, medical
8:47
8 minutes, 47 seconds
support and compensation. Many described feeling abandoned by the institutions they had trusted. And when people cannot
8:55
8 minutes, 55 seconds
get answers, when access to information takes years, and when accountability seems out of the reach, public
9:02
9 minutes, 2 seconds
confidence suffers. We should not be surprised when Canadians begin to question their institutions. Trust
9:09
9 minutes, 9 seconds
cannot simply be demanded. Trust must be earned. It's earned through openness.
9:14
9 minutes, 14 seconds
It's earned through honesty. It's earned by acknowledging mistakes. and is earned by ensuring that governments are accountable for their decisions. I

Chapter 5: Call for continued inquiry

9:22
9 minutes, 22 seconds
believe Canadians deserve clear answers to several questions. First, why should any access to information request involving important public health
9:31
9 minutes, 31 seconds

records require an extension measured in decades rather than months? Second, what steps are being taken to identify and
9:38
9 minutes, 38 seconds
investigate potentially under reportported serious adverse events?
9:43
9 minutes, 43 seconds
Third, are Canadians who have experienced vaccine related injuries receiving the medical support and the compensation they need? And fourth, what
9:52
9 minutes, 52 seconds
independent oversight exists to ensure that public health institutions are being transparent and accountable?
10:00
10 minutes
These questions should not be controversial. They should be fundamental expectations in a democratic society.
10:08
10 minutes, 8 seconds
The tainted blood scandal taught can Canada a painful lesson. When the warning signs are missed, when information is not adequately shared,
10:16
10 minutes, 16 seconds
and when accountability is delayed, the consequences can last for generations.
10:21
10 minutes, 21 seconds
We cannot change what's happened in the past, but we can certainly learn from it. And we can insist that our institutions do better. Canadians
10:29
10 minutes, 29 seconds
deserve transparency. Canadians deserve accountability. And Canadians deserve the truth. Not 15 years from now, not
10:38
10 minutes, 38 seconds
after another generation has passed, but in a time frame that allows people to obtain answers and seek the support they need. This is not about protecting one
10:46
10 minutes, 46 seconds
political party or attacking another one. It's about protecting the public's right to know. Because if we want to restore confidence in our institutions,
10:55
10 minutes, 55 seconds
the solution is not less scrutiny. It is more transparency, more accountability, and a willingness to confront difficult
11:03
11 minutes, 3 seconds
questions even when the answers are uncomfortable. So, what comes next? I believe we need to continue to listen to
11:10

11 minutes, 10 seconds
Canadians and hear their stories. As long as people are struggling to get answers, medical uh medical care, and the support they need, their stories
11:18
11 minutes, 18 seconds
must continue to be heard. That is why we are planning on holding town halls across the country, giving more Canadians the opportunity to come
11:25
11 minutes, 25 seconds
forward and share their experiences. The Allison Inquir was an important beginning, but it was never intended to be the end of the conversation. We heard
11:33
11 minutes, 33 seconds
from hundreds of Canadians, but we know there are many more who still want to be heard, and we intend to give them that opportunity. We will continue to listen.
11:43
11 minutes, 43 seconds
We will continue to document their experiences and we will be bringing their concerns forward because meaningful change requires continued
11:50
11 minutes, 50 seconds
attention, careful investigation and accountability. These Canadians deserve to be heard. They deserve answers and
11:58
11 minutes, 58 seconds
they deserve to know that they have not been forgotten. Thank you very much.

Chapter 6: Reflections on the hearings

12:09
12 minutes, 9 seconds
So this is our first press conference after the hearings that were held from September 8th to 11th in committee room in parliament.
12:21
12 minutes, 21 seconds
And I want to thank the witnesses that came. I want to thank those vaccine
12:27
12 minutes, 27 seconds
injured that chose to come and attend at the hearings.
12:34
12 minutes, 34 seconds
[clears throat] If you watched the Allison inquiry, you'll understand exactly what I'll be talking about. If
12:41
12 minutes, 41 seconds
you have not watched the Allison inquiry, you must.
12:47
12 minutes, 47 seconds
It will change your life. It will change your perspective.
12:51

12 minutes, 51 seconds
It will cause you to start asking some uncomfortable questions that are absolutely necessary
12:59
12 minutes, 59 seconds
for us to ask. [clears throat] And we don't have the answers yet. were still inquiring, but we had witnesses that, you know, we
13:09
13 minutes, 9 seconds
had one witness we had to reschedu because this witness needed dialysis in Ottawa and and the dialysis clinic had
13:17
13 minutes, 17 seconds
only specific times they could fit this witness in. You know, another witness, we had to have an extension cord so that his feeding pumps, the batteries
13:25
13 minutes, 25 seconds
wouldn't run out because that would be a catastrophe. We rented six wheelchairs to be able to accommodate getting the
13:33
13 minutes, 33 seconds
witnesses up from the first floor [clears throat] to an upper floor where the committee room was the fourth floor and had to have volunteers to move them.
13:44
13 minutes, 44 seconds
It was such an honor. It was such an honor for all of us to be able to meet these people,
13:53
13 minutes, 53 seconds
to be able to grieve with these people, to be able to share what truly was a a religious experience. And and if you
14:02
14 minutes, 2 seconds
haven't watched, watch. You'll understand exactly what I'm talking about. We literally prayed every morning before the hearings that God would speak
14:10
14 minutes, 10 seconds
through the witnesses. And I absolutely believe that he did. And [clears throat] if you watch, you'll come to the exact same conclusion.

Chapter 7: Alberta task force report

14:18
14 minutes, 18 seconds
One of our witnesses at the inquiry was Dr. Gary Davidson, a medical doctor of
14:24
14 minutes, 24 seconds
high esteem in Alberta. Dr. Davidson was appointed by Premier Daniel Smith of the Alberta government to put together a
14:33
14 minutes, 33 seconds

task force. It was called the Alberta COVID 19 pandemic data review task
14:39
14 minutes, 39 seconds
force. This was an official inquiry by a provincial government in Canada. Dr.
14:46
14 minutes, 46 seconds
Davidson put together a team of other medical doctors, of other researchers. One that sticks out was Dr. Dr. J.
14:56
14 minutes, 56 seconds
Badacheria, who now is director of the National Institute of Health in the United States, likely the most important and
15:04
15 minutes, 4 seconds
influential health [cough and clears throat] branch or or bureaucracy in the world.
15:10
15 minutes, 10 seconds
This was a a task force that in their report was completely transparent on the evidence they were
15:19
15 minutes, 19 seconds
relying on and they came up with some conclusions. Now, what's interesting about this is this provincial government
15:27
15 minutes, 27 seconds
report was finished and issued on January of 2025.
15:35
15 minutes, 35 seconds
That is now almost 2 years ago.
15:39
15 minutes, 39 seconds
Most of you listening, most of you who watch Dr. Davidson actually had no idea
15:47
15 minutes, 47 seconds
that a provincial government had put together a highc caliber team to prepare an official report and recommendations
15:55
15 minutes, 55 seconds
for the government. And why didn't they know that the media buried it?
16:04
16 minutes, 4 seconds
The media buried it. The mainstream media did not inform the Canadian public that there had been an official
16:11
16 minutes, 11 seconds
provincial investigation into COVID 19 issues and they buried it.
16:19
16 minutes, 19 seconds
You need to ask yourself the question why. I'm going to read to you two recommendations in this report,

16:26
16 minutes, 26 seconds
chapter 8, on the CO 19 vaccines. And in that chapter, they outline all of the evidence and reasons leading to these
16:35
16 minutes, 35 seconds
conclusions. They were absolutely transparent.
16:40
16 minutes, 40 seconds
The first recommendation by this provincial government report immediately
16:47
16 minutes, 47 seconds
halt the use of all COVID 19 vaccines without full disclosure to patients regarding both the safety and efficacy
16:56
16 minutes, 56 seconds
issues by their physicians.
17:00
17 minutes
Now, they don't say the safety and efficacy of the vaccine. They say the safety and efficacy issues because they
17:07
17 minutes, 7 seconds
outline and document the evidence some very serious and concerning safety and
17:14
17 minutes, 14 seconds
efficacy issues. So they felt compelled to call upon the Alberta provincial
17:21
17 minutes, 21 seconds
government to stop all CO 19 vaccines without absolute and full disclosure by
17:29
17 minutes, 29 seconds
physicians on the safety and efficacy issues and none of us were told about this.

Chapter 8: Vaccine policies for youth

17:37
17 minutes, 37 seconds
The second recommendation in chapter 8 is end the use
17:44
17 minutes, 44 seconds
of the COVID 19 vaccines for healthy teenagers or I'm sorry for healthy
17:50
17 minutes, 50 seconds
children and teenagers as other jurisdictions have done. See Denmark,
17:58
17 minutes, 58 seconds
Sweden, Norway, Finland and the United Kingdom.
18:04

18 minutes, 4 seconds
I am quoting from the Davidson report and you might ask well why would they be calling for the complete cessation of
18:12
18 minutes, 12 seconds
vaccination of of 18 and under and listing other mainstream countries that
18:19
18 minutes, 19 seconds
have done so. If you read the report you will see why they did this conclusion. I asked some researchers volunteer
18:28
18 minutes, 28 seconds
researchers because this this is two years old this information.
18:32
18 minutes, 32 seconds
[clears throat] Can you give me a list of other countries that do not permit COVID 19 vaccines
18:40
18 minutes, 40 seconds
for children and teenagers? they have given me in addition to those already listed in the Davidson report. Ireland,
18:48
18 minutes, 48 seconds
Argentina, Chile, Germany, Spain,
18:56
18 minutes, 56 seconds
Netherlands, Portugal, Hungary, South Korea, Switzerland,
19:05
19 minutes, 5 seconds
India, Belgium, Estonia, Iceland, Luxembourg, Romania, Slovakia,
19:15
19 minutes, 15 seconds
Australia, That's just the list the volunteers came up with.
19:21
19 minutes, 21 seconds
[clears throat] It begs the question, are Canadian children guinea pigs
19:29
19 minutes, 29 seconds
for the CO 19 vaccine? What do the regulatory authorities in these other countries know
19:38
19 minutes, 38 seconds
that that Health Canada is refusing to know? Why is it that there's a long list of countries that do not permit the
19:47
19 minutes, 47 seconds
injection of COVID 19 vaccines on their children and teenagers where in Canada it's permissible to inject a baby of 6 months old.
20:00
20 minutes
We are calling the the Allison inquiry cannot make recommendations but we are an inquiry and so

we're calling for an
20:07
20 minutes, 7 seconds
explanation here. We are publicly calling on Health Canada and every province because Health Canada
20:16
20 minutes, 16 seconds
approves the vaccines. But it is the provinces that run health care because it's provincial jurisdiction. It's the
20:24
20 minutes, 24 seconds
provinces that decide whether children and teenagers in Canada are going to continue to be injected with CO 19 vaccines.
20:34
20 minutes, 34 seconds
So, [clears throat] we're calling on Health Canada and the provinces to explain why healthy Canadian children
20:42
20 minutes, 42 seconds
are allowed to receive the CO 19 vaccines while children in a large number of countries are protected from the vaccine.
20:52
20 minutes, 52 seconds
We are calling on Health Canada and every provincial government to explain why the Alberta government report
21:00
21 minutes
calling for an end of the CO 19 vaccine for healthy children and teenagers has
21:07
21 minutes, 7 seconds
not been followed there. The evidence is in the report. Much more evidence has come forward during the last two years.
21:16
21 minutes, 16 seconds
So we're calling on the provincial governments and Health Canada to answer those two questions. There's also another question we're calling on them
21:25
21 minutes, 25 seconds
on them to ask. So why are Health Canada and the provinces in
21:31
21 minutes, 31 seconds
November of 2026, this is November 5th, 2026. So why are they in November of
21:37
21 minutes, 37 seconds
2026 permitting children to be injected with COVID 19 vaccines that to this day
21:45
21 minutes, 45 seconds
to November 5th, 2026 have not been proven to be safe and effective.

Chapter 9: Regulatory approval process

21:52
21 minutes, 52 seconds
Now that might shock some people because the media messaging and the governing me government messaging has consistently been safe and effective, safe and
22:00
22 minutes
effective, safe and effective. it we were it was recited so often that we were all becoming exhausted
22:08
22 minutes, 8 seconds
from hearing it. To this day, Health Canada has on the Health Canada website
22:14
22 minutes, 14 seconds
pages for every CO 19 vaccine and at the top in bold is some line like all vaccines or all drugs approved by Health
22:22
22 minutes, 22 seconds
Canada have been proven to be safe and effective and of the highest quality.
22:27
22 minutes, 27 seconds
The clear [clears throat] messaging to the Canadian public has been that these are safe and effective. They have not been proven to be safe and effective. In
22:36
22 minutes, 36 seconds
2020, before there was any application for approval of a CO 19 vaccine, the Minister of Health through an interim
22:43
22 minutes, 43 seconds
order exempted all CO 19 drugs from having to prove safety and and efficacy as our
22:52
22 minutes, 52 seconds
requirements in the regular drug approval process. If you read that interim order, it will shock you. The
22:59
22 minutes, 59 seconds
pharmaceutical companies could get approval to use their CO 19 vaccines in
23:05
23 minutes, 5 seconds
Canada without even submitting safety data, without even submitting efficacy
23:12
23 minutes, 12 seconds
data to Health Canada. Well, why would they have to submit it? They didn't have to prove safety and efficacy. Now, this isn't a secret. This isn't a conspiracy.
23:22
23 minutes, 22 seconds
It's set out in Canadian law for everyone to see.
23:27
23 minutes, 27 seconds
It's absolutely amazing that many people hearing this will not understand basic Canadian law that any journalist
23:35

23 minutes, 35 seconds
spending 10 minutes in the last six years could have found out
23:42
23 minutes, 42 seconds
the Allison inquiry to assist you in our rule 25. You can go to allisoninquiry.com.
23:49
23 minutes, 49 seconds
Rule 25. We have set out for you all of the Canadian law on this and a memo
23:55
23 minutes, 55 seconds
explaining this and it will shock you because it's out in the open. It's clear Canadian law that these vaccines were
24:04
24 minutes, 4 seconds
exempted from having to prove safety and efficacy and they're still exempted.
24:10
24 minutes, 10 seconds
[clears throat]
24:10
24 minutes, 10 seconds
Is COVID 19 an emergency today in November 2026?
24:15
24 minutes, 15 seconds
So that children and teenagers and adults, healthy adults, should be injected with a product that has not been proven safe and effective according
24:23
24 minutes, 23 seconds
to our regular drug approval process or should safety and efficacy be proven?
24:31
24 minutes, 31 seconds
I mean, it's shocking. Senator Johnson at the Ellison inquiry was explaining. I mean, Anthony Fouchy
24:38
24 minutes, 38 seconds
in the United States, Dr. Fauci, he was the world authority on COVID. He was the spokesman. Well, he kept a diary and
24:46
24 minutes, 46 seconds
Senator Johnson testified under oath at the Ellison inquiry because he's got a copy of the diary and he's he's attempted to examine Dr. Fouchy under oath and Dr. Fauci takes the fifth.
24:57
24 minutes, 57 seconds
There's videos of this, but in his diary, Dr. Dr. Fouchy basically explains well CO 19 was like a bad flu
25:05
25 minutes, 5 seconds
and they knew very early on that it just affected like a bad flu basically generally elderly people who had coorbidities. So they're susceptible.
25:15
25 minutes, 15 seconds
That's still the case today with CO 19.

Chapter 10: Accountability and liability

25:18
25 minutes, 18 seconds
Now what's interesting is is you could say okay there was this mass hysteria in 2020 and the government just went along with it. Well the government didn't go
25:25
25 minutes, 25 seconds
along with it at all. Health Canada dictated to the government the interim order, ended [clears throat] the changes to the
25:32
25 minutes, 32 seconds
law, and the government relied on Health Canada expertise. But then after 2020,
25:39
25 minutes, 39 seconds
the law kept changing to continue to permit COVID 19 vaccines from being exempted from safety and efficacy.
25:49
25 minutes, 49 seconds
So, here we are in 2026. There's been kind of some Iiteration changes, but now they've changed it. So there's this
25:57
25 minutes, 57 seconds
class of drugs called public health emergency drugs, and there actually has to be a public health emergency for the Minister of Health to put a drug on this
26:06
26 minutes, 6 seconds
list, which then could exempt the drug from safety and efficacy requirements.
26:10
26 minutes, 10 seconds
But CO 19 vaccines today would not meet that definition. So they actually put in a separate section to allow the Minister
26:18
26 minutes, 18 seconds
of Health to exempt CO 19 vaccines even though there's not a public health emergency concerning them. So why hasn't
26:26
26 minutes, 26 seconds
Health Canada and the provinces and we're calling them on them to answer this question. Why haven't they told the public that to this day to November 5th,
26:35
26 minutes, 35 seconds
2026, children are being injected with a product that is not proven to be safe
26:43
26 minutes, 43 seconds
and effective according to our regular drug approval process?
26:49
26 minutes, 49 seconds
Why is it that the Alberta government report calling for a halt on all CO 19 vaccines without full

disclosure has not
26:58
26 minutes, 58 seconds
been followed? Please explain why it shouldn't be followed because you're not following it.
27:04
27 minutes, 4 seconds
We are calling on Health Canada and the provinces to explain why the Canadian public should not be given full
27:12
27 minutes, 12 seconds
disclosure before being injected with a product exempted from proving safety and efficacy. And I'll back up and state the
27:20
27 minutes, 20 seconds
CO 19 vaccines are the only drugs in Canada exempted from having to have safety and efficacy
27:29
27 minutes, 29 seconds
proven that I'm aware of. They're the only ones on this list.
27:33
27 minutes, 33 seconds
We're calling on Health Canada to explain why CO 19 vaccines are the only drugs on the market exempted from having to prove safety and efficacy.
27:44
27 minutes, 44 seconds
Now, [clears throat] I speculate that it is fear over liability. Dr.
27:53
27 minutes, 53 seconds
Davidson testified that um doctors likely are not coming forward out of fear of liabilities. In my personal
28:00
28 minutes
opinion, Health Canada is most likely liable for offenses, criminal offenses.
28:08
28 minutes, 8 seconds
There was a group called Citizen Investigative Investigation Services Canada. You can go to their website where they list the offenses, the
28:15
28 minutes, 15 seconds
criminal code offenses that likely health Canada is a party to for their actions during CO 19 considering
28:23
28 minutes, 23 seconds
and I mean even on their website today in my opinion they've committed fraud in saying safe and effective when they know that the Canadian populace would
28:31
28 minutes, 31 seconds
interpret it a way differently than they intended. And then of course they're in a conflict of interest now continuing to regulate these CO 19 vaccines drugs
28:40
28 minutes, 40 seconds

because when you are facing potential criminal liability for your actions on how you've regulated a set of
28:48
28 minutes, 48 seconds
drugs, you should no longer be tasked with regulating those drugs. And so we're asking the public to answer the question whether Health Canada should
28:57
28 minutes, 57 seconds
continue to have authority to regulate the CO 19 vaccines.
29:08
29 minutes, 8 seconds
Thank you.

Chapter 11: Closing gratitude and support

29:10
29 minutes, 10 seconds
Final thoughts regarding the Allison inquiry have to go to the witnesses.
29:17
29 minutes, 17 seconds
Thank you so much for participating.
29:20
29 minutes, 20 seconds
Thank you for being so brave. Thank you for coming down to Ottawa, traveling from all over Canada.
29:28
29 minutes, 28 seconds
to all of the vaccine injured and to the people that came
29:35
29 minutes, 35 seconds
without their family members because their family members had actually died because of the shots.
29:42
29 minutes, 42 seconds
We thank you so much for being brave.
29:45
29 minutes, 45 seconds
We understand your pain. We're starting to understand it.
29:51
29 minutes, 51 seconds
We want you to know that you're not alone anymore. The silence is broken.
29:56
29 minutes, 56 seconds
And above all else, we want you to know that you are loved and that is the beginning and the middle and the end and you are not forgotten.
30:07
30 minutes, 7 seconds
Thank you.
30:10
30 minutes, 10 seconds
We don't have any questions. Thank you very much. Okay. Thank you. Thanks.
